Subject: Gorge Dam Treatability Study Update

Hi Mary Beth – We had a productive call yesterday with Tipping Point Resources Group and agreed on a path forward. We discussed the change in the berm requirement and agreed the treatability scope will include running some strength tests to bracket and optimize the sediment leftover from the initial treatability test. Once we have those results, they'll test the sediment recently collected by Alison and JTannar to help understand the treatment of the "worst case" sediment which is the fluff layer. Overall, we were happy with the outcome of our call.

One item that came up was the type of makeup water to use for the Portland Cement. Ideally, we'd like to use City of Akron potable water which is what would be used during the full-scale construction. We'd like to contact Heather Ullinger/CoA and coordinate the shipping of 5 gallons of CoA potable water to the treatability lab. Do you have any objections to us requesting this assistance?

Cheers!

Bill
